ORB author review package

Phase5.9 | NIFTY50 | 8 November2026 | Frozen configuration A

Purpose. Please draw the ORB entries and levels you intended, then define the rules behind them. The package shows what the current algorithm recognizes and rejects. It does not establish that every journal label should become a trade.

No invented author entry. All expected author prices, directions and exact candles remain unknown. The box labelled **AUTHOR ORB ENTRY — TO BE MARKED** is outside the price/time plot. Orange/teal reference lines are research-engine constructions, not lines attributed to you.

Independently recounted evidence	Count
Original journal data rows	190
ORB-labelled rows / unique dates	89 /89
Evaluable ORB journal dates	85
Dates generating and executing frozen ORB	35
Evaluable dates with no ORB signal	50
ORB-journal dates with an IRF execution	34
Handwritten ORB disputed observations	13
Unique author-review cases (overlap removed)	52

Counts overlap. Eleven handwritten dates belong to the50 missing-signal dates. Two more handwritten observations are outside the ORB journal labels. Among the50 missing dates,34 have IRF,5 another strategy and12 no trade; one day has IRF then PDS. Four literal ORB Saturday dates have no evaluable session and are not silently corrected.

How to use this packet. Start with the five priority cases. Each has a five-minute overview, opening one-minute detail, prior-five-session context and a question sheet. Review the remaining eight handwritten charts, the separate gap contrast and the full50-date summary. The workbook has one row per unique case, with author response and approval fields blank.

The existing controller did not bypass an earlier confirmed frozen ORB. That result does not prove strategy fidelity. No new rule or candidate profitability backtest is authorized by this packet.

Six grouped questions

Answer once as a general definition, then mark case-specific exceptions.

Q1. Inner level and multi-session zone
Which exact resistance/support price or zone should the opening candle break? Mark its boundaries and establishing candles, say bodies/wicks/both, and define the current/previous/multi-session lookback and selection when several levels exist.

Source: ORB PDF pp.4-7; reference bands pp.12-13

Q2. Candle strength and colour
What makes an opening candle sufficiently strong? State whether a minimum body or maximum adverse wick is required, how a conditional pin qualifies, and confirm directional colour. Please mark an acceptable and unacceptable example rather than choosing a percentage to match the journal.

Source: ORB PDF pp.3-7,9-10; handwritten p.5 green-long clarification

Q3. Trendline anchors and qualification
When is a trendline required? Identify two or more exact candle anchors that were known before entry. Define pivot confirmation, permitted sessions, intervening price crossings, and whether price must break or remain on a side with a completed close.

Source: ORB PDF pp.5-7

Q4. Moving average and gap crossing
What exact average, timeframe and input do you use? Does 200 DMA mean a 200-day SMA or the average on a five-minute chart? Can the first candle open on one side and close on the other? Is a directional overnight gap/prior-close-side test mandatory, and is the average an entry condition or only a trend filter?

Source: ORB PDF pp.2-3,5,7-9,12; gap figures differ from some wording

Q5. Established trend
What evidence establishes trend before a Method 1/2 trade? Must it pre-exist in the previous session, can the opening move establish it, and what bullish/bearish structure is required in addition to the EMA location?

Source: ORB PDF pp.1,3-7,12

Q6. Method, timestamp and rejection
For each marked trade, identify Method 1, Method 2, gap, or another method with its PDF page. Mark candle start/end, BUY/SELL, decision and intended execution time; confirm wick versus close and any second confirmation. What exact condition would make you ignore this ORB trade?

Source: ORB PDF pp.1-3,11; handwritten ORB comments have no exact entry

Trade confirmation, source support for a general rule and engineering implementation approval are separate decisions. Leave unresolved responses blank. An author-marked earlier entry would still need a causal rule check and the original portfolio collision/state rules.

Priority1: 2025-12-24 | Five-minute overview

Configuration A | Actual candles and existing simulated ledger | Author entry remains unknown

2025-12-24 | NIFTY 50 | ORB author review | A

5-minute candles | previous-session close context + full review session

Opening 09:15-09:20 GREEN: O 26,183.75 H 26,201.55 L 26,142.00 C 26,198.25

Author response - 2025-12-24

Mark the chart and record exact candle/level evidence. All responses are blank.

Original comment: ORB should be activated instead of IRF.

AUTHOR ORB ENTRY — TO BE MARKED. Do not treat the engine's current lines as your own intended levels.

A. Method

Method 1 / Method 2 / Gap / Other described in PDF; identify the PDF page.

B. Entry candle

Exact candle start/end; BUY or SELL; decision/execution time; entry price if known; why this candle qualifies.

C. Support / resistance

Exact price or zone boundaries; bodies/wicks/both; establishing candle dates/times; current/previous/multiple sessions; level selection.

D. Trendline

Required? Exact anchor candles/prices; break or hold a side; completed close required; any prohibited intervening crossing.

E. Candle confirmation

Required colour; minimum body / maximum wick; close beyond versus wick break; second confirmation; conditional pin rule.

F. Moving average

Indicator name/period/input/timeframe;200-day SMA versus5m average; may open one side and close the other; entry gate or trend filter?

G. Rejection / approvals

What exact condition would make you ignore this ORB trade? Separately record trade confirmation, source support and engineering approval.

Priority2: 2025-10-08 | Five-minute overview

Configuration A | Actual candles and existing simulated ledger | Author entry remains unknown

SHORT Method 2: inner_close, trend, trendline, quality
SHORT Gap/200DMA: gap_direction, gap_crossing, ma_close, quality

IST starts; first close known09:20. EMA200 recursive, seeded with pre-period history. E/X are ledger minute labels, not exact intraminute times. Target gaps may be model fills.

Author response - 2025-11-28

Mark the chart and record exact candle/level evidence. All responses are blank.

Original comment: ORB should be activated instead of IRF.

AUTHOR ORB ENTRY — TO BE MARKED. Do not treat the engine's current lines as your own intended levels.

A. Method

Method 1 / Method 2 / Gap / Other described in PDF; identify the PDF page.

B. Entry candle

Exact candle start/end; BUY or SELL; decision/execution time; entry price if known; why this candle qualifies.

C. Support / resistance

Exact price or zone boundaries; bodies/wicks/both; establishing candle dates/times; current/previous/multiple sessions; level selection.

D. Trendline

Required? Exact anchor candles/prices; break or hold a side; completed close required; any prohibited intervening crossing.

E. Candle confirmation

Required colour; minimum body / maximum wick; close beyond versus wick break; second confirmation; conditional pin rule.

F. Moving average

Indicator name/period/input/timeframe;200-day SMA versus5m average; may open one side and close the other; entry gate or trend filter?

G. Rejection / approvals

What exact condition would make you ignore this ORB trade? Separately record trade confirmation, source support and engineering approval.

Author response - _____

Mark the chart and record exact candle/level evidence. All responses are blank.

AUTHOR ORB ENTRY — TO BE MARKED. Do not treat the engine's current lines as your own intended levels.

A. Method

Method 1 / Method 2 / Gap / Other described in PDF; identify the PDF page.

B. Entry candle

Exact candle start/end; BUY or SELL; decision/execution time; entry price if known; why this candle qualifies.

C. Support / resistance

Exact price or zone boundaries; bodies/wicks/both; establishing candle dates/times; current/previous/multiple sessions; level selection.

D. Trendline

Required? Exact anchor candles/prices; break or hold a side; completed close required; any prohibited intervening crossing.

E. Candle confirmation

Required colour; minimum body / maximum wick; close beyond versus wick break; second confirmation; conditional pin rule.

F. Moving average

Indicator name/period/input/timeframe;200-day SMA versus5m average; may open one side and close the other; entry gate or trend filter?

G. Rejection / approvals

What exact condition would make you ignore this ORB trade? Separately record trade confirmation, source support and engineering approval.
